The Future of Nursing Jan 23 2022 The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore,

regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Nurses' Clinical Decision Making Aug 18 2021 This work includes a foreword by Carl Thompson, Senior Research Fellow, Department of Health Sciences, University of York. This inspiring text offers guidance and innovative ideas for teaching and learning. It explains how nurses make clinical decisions through the development of narratives, and how, using narratives, nurses gain a far more intimate knowledge of the patient than doctors can. The book considers service delivery around patients, renegotiation of professional roles of medical staff and their boundaries of responsibility and authority. "Nurses' Clinical Decision Making" will appeal to all undergraduate and postgraduate students of nursing, registered nurses and nurse managers. Nurse educators, hospital managers, doctors and healthcare risk managers will also find the information contained here invaluable. 'If nurses are decision-makers how can their role and practice be explained? Can decision-making be taught and are there different levels of decision-making skill? If so, how can expert decision-makers be recognised? These are just some of the pertinent questions that need to be asked if we are to recognise and understand the centrality of clinical decision-making in nursing practice. Clinical work is complex and takes place in a complex environment that centres around individuals who themselves are physically, socially and spiritually complex. Clinical work also involves multiple participants (nurses, doctors, patients, physiotherapists, occupational therapists, pharmacists to name a few) who in the course of a days work can make scores of decisions.' - Russell Gurbutt, in the Preface.

The Nurse's Reality Gap Jun 23 2019 "Many faculty members struggle as they watch students who were successful in school become discouraged upon entering clinical practice. The questions become, 'Who is failing?' and 'What can be done to better prepare novice nurses for the reality of today's nursing field?' Author and educator Leslie Neal-Boylan asks hard questions about why students who succeed academically may fail in nursing jobs. Both faculty members and students will find insight and solutions for bridging the gap between nursing school and the realities of practice and the profession."--Back cover.

Cognitive Informatics in Health and Biomedicine Mar 25 2022 Enormous advances in information technology have permeated essentially all facets of life in the past two decades. Formidable challenges remain in fostering tools that enhance

productivity but are sensitive to work practices. Cognitive Informatics (CI) is the multidisciplinary study of cognition, information and computational sciences that investigates all facets of human computing including design and computer-mediated intelligent action, thus is strongly grounded in methods and theories from cognitive science. As an applied discipline, it has a close affiliation with human factors and human-computer interaction, and provides a framework for the analysis and modeling of complex human performance in technology-mediated settings and contributes to the design and development of better information systems. In recent years, CI has emerged as a distinct area with special relevance to biomedicine and health care. In addition, it has become a foundation for education and training of health informaticians, the Office of the National Coordinator for Health Information Technology initiating a program including CI as one of its critical elements to support health IT curriculum development. This book represents a first textbook on cognitive informatics and will focus on key examples drawn from the application of methods and theories from CI to challenges pertaining to the practice of critical-care medicine (CCM). Technology is transforming critical care workflows and re-organizing patient care management processes. CCM has proven to be a fertile test bed for theories and methods of cognitive informatics. CI, in turn, has contributed much to our understanding of the factors that result in complexity and patient errors. The topic is strongly interdisciplinary and will be important for individuals from a range of academic and professional backgrounds, including critical care specialists, psychologists, computer scientists, medical informaticians, and anthropologists.

(AHRQ Publication No. 08-0043)."--Online AHRQ blurb, <http://www.ahrq.gov/qual/nursesdbk>.

Nursing Informatics Sep 26 2019 Nursing, like other health-related professions, is information-intensive. The quality of care a patient receives is based on the soundness of judgment exercised by the health care team. Underlying sound judgment is up-to-date information. Unless nurses have access to accurate and pertinent information, the care being rendered will not be of the highest standard. What is required is not necessarily more rapid and efficient information services. Modern technology can process immense amounts of data in the blink of an eye. What we in the health professions need are information systems that are more intelligent, systems that can integrate information from many sources, systems that analyze and synthesize information and display it so that it may be applied directly in patient care—in other words, information that answers a question or even gives practical advice. In order to accomplish such objectives, work is needed to establish the scientific and theoretical basis for the use of computing and information systems by health professionals. This is the research component. In addition, there is the need for continued development and evaluation of practical information systems.

Nursing Informatics Feb 09 2021 "Nursing informatics (NI) is the specialty that integrates nursing science with multiple information and analytical sciences to identify, define, manage and communicate data, information, knowledge and wisdom in nursing practice. For many people, NI, and health care informatics in general, are about technology. This is especially true of electronic health records (EHRs) that are required of all care facilities. That is just one among many aspects of nursing informatics, a distinctive practice specialty that is the focus of this new publication. The second edition of *Nursing Informatics: Scope and Standards of Practice* is the most comprehensive, up-to-date resource available in this subject area. The book covers the full scope of nursing informatics and outlines the competency level of nursing practice and professional performance expected from all informatics nurses and nurse specialists. In addition, it details the nursing informatics competencies needed by any RN, spans all nursing careers and roles, and reflects the impact of informatics in any health care practice environment. This is a must-read for nurses, as informatics touches on every RN's practice." --Publisher's website.
