The Other Side of Truth Dec 21 2021 In The Other Side of Truth, filmmaker Paul Kimball crosses the Rubicon of the imagination to explore the idea that what we call the 'paranormal' is actually a form of artistic expression created by an advanced non-human intelligence to inspire us to think about who we are, where we have been, and where we are going. Using his own journey of discovery as the starting point, Kimball presents the 'other side of truth' - the world not as we have been told it is, but as we are being encouraged to imagine that it could become.

Bringing Out the Best in Your Wife Sep 25 2019 Most "relationship books" are written for women, but women aren't the only ones who want happy, enduring marriages. *Bringing Out the Best in Your Wife* is written with men in mind, men who want to build satisfying relationships but just aren't sure how. The secret, Dr. H. Norman Wright reveals, is mutual affirmation. But first, husbands have to understand that women receive respect and encouragement differently than men. When husbands discover how to speak the language of love their wives understand, relationships are taken to a whole new level. Dr. Wright lays out biblical and practical ways husbands can bring out the best in their wives. Readers will find firsthand testimonies from men just like them, who share the daily frustrations of living with a person so different from themselves. They may also be surprised by what they learn about women from the personal stories told by wives striving to make their marriages work. Each step toward a healthy, satisfying relationship is presented with a real-life situation that men will find immediately familiar. And as readers take each successive step, they will see the positive impact that encouragement, prayer, romance, and inspiration have on the marriage they've always wanted.

The New Psychedelic Revolution Feb 08 2021 A bold exploration of modern psychedelic culture, its history, and future • Examines 3 modern psy-culture architects: chemist Alexander "Sasha" Shulgin, mycologist-philosopher Terence McKenna, and visionary artist Alex Grey • Investigates the use of microdosing in extreme sports, the psy-trance festival experience, and the relationship between the ego, entheogens, and toxicity • Presents a "History of Visionary Art," from its roots in prehistory, to Ernst Fuchs and the Vienna School of the Fantastic, to contemporary psychedelic art After the dismantling of a major acid laboratory in 2001 dramatically reduced the world supply of LSD, the psychedelic revolution of the 1960s appeared to have finally run its course. But the opposite has actually proven to be true, and a psychedelic renaissance is rapidly emerging with the rise in popularity of transformational festivals like Burning Man and BOOM!, the return to positive media coverage of the potential benefits of entheogens, and the growing number of celebrities willing to admit the benefits of their own personal use. Along with the return of university research, the revival of psychedelic philosophy, and the increasing popularity of visionary art, these new developments signify the beginning of a worldwide psychedelic cultural revolution more integrated into the mainstream than the counterculture uprising of the 1960s. In his latest book, James Oroc defines the borders of 21st-century psychedelic culture through the influence of its three main architects-- chemist Alexander Shulgin, mycologist Terence McKenna, and visionary artist Alex Grey--before illustrating a number of facets of this "Second Psychedelic Revolution," including the use of microdosing in extreme sports, the tech-savvy psychedelic community that has arisen around transformational festivals, and the relationship between the ego, entheogens, and toxicity. This volume also presents for the first time a "History of Visionary Art" that explains its importance to the emergence of visionary culture. Exploring the practical role of entheogens in our selfish and fast-paced modern world, the author explains how psychedelics are powerful tools to examine the ego and the shadow via the transpersonal experience. Asserting that a cultural adoption of the entheogenic perspective is the best chance that our society has to survive, he then proposes that our ongoing psychedelic revolution--now a century old since the first synthesis of a psychedelic in 1918--offers the potential for the birth of a new Visionary Age.

Beyond Zero and One Aug 17 2021 "Andrew Smart deftly shows why it's time for us to think deeply about thinking machines before they begin thinking deeply about us." -Douglas Rushkoff, author, *Escaping the Growth Trap*, *Present Shock*, and *Program or Be Programmed* "Provocative and cool." -Cory Doctorow "Forget the Turing test--will the supersmart AIs that we hear so much about these days pass the acid test? In this playful, informative, and prescient book, Andrew Smart brings psychedelics into dialogue with neuroscience in order to challenge the whiz-bang computational views of human and machine sentience that dominate the headlines. Giving robots LSD sounds like a joke, but Smart is dead serious in his critique of the hidden and sometimes dangerous biases that underlie both popular and scientific fantasies of digital minds."

-Erik Davis, host of "Expanding Mind" and author, *Techgnosis: Myth, Magic, and Mysticism in the Age of Information* "Philosophy, psychedelics, robots, and the future; consciousness and intelligence, what else do you desire? Here you will see why those machines that reach singularity will be smarter than us and take over the world--and shall need to be conscious..and maybe they can only be conscious if they are human enough. The thesis of the book, and the path shown us by Smart, leads to a great trip, of imagination and philosophy, of maths and neuroscience." --Dr. Tristan Bekinschtein, Lecturer, Department of Psychology, University of Cambridge Can we build a robot that trips on acid? This is not a frivolous question, according to neuroscientist Andrew Smart. If we can't, he argues, we haven't really created artificial intelligence. In an exposition reminiscent of crossover works such as Gödel, Escher, Bach and Fermat's Last Theorem, Andrew Smart weaves together Mangarevan binary numbers, the discovery of LSD, Leibniz, computer programming, and much more to connect the vast but largely forgotten world of psychedelic research with the resurgent field of AI and the attempt to build conscious robots. A book that draws on the history of mathematics, philosophy, and digital technology, *Beyond Zero and One* challenges fundamental assumptions underlying artificial intelligence. Is the human brain based on computation? Can information alone explain human consciousness and intelligence? Smart convincingly makes the case that true intelligence, and artificial intelligence, requires an appreciation of what is beyond the computational.

PERCEPTION in Architecture Jul 16 2021 Definitions of space are as diverse as the disciplines in which it plays a fundamental role; from science and philosophy to art and architecture, each field's perception of space is often simplified or reduced. This consequently denies access to 'new spaces', whose definitions and perspectives, strategies and impacts on human perception are rarely considered in any cohesive manner. This is where the Aedes Network Campus Berlin (ANCB) programme 'No Space Without Traits' came in: particularly through artistic approaches, it aimed to open doors into spatial worlds that until now have remained closed. The symposium 'PERCEPTION in Architecture. HERE and NOW' was part of this programme and invited critical and comprehensive contributions by academics, artists, architects, designers and curators. These presentations are brought together in this volume to reflect upon new spatial concepts and thus access 'new spaces' of perception in architecture. The symposium stimulated a discourse focused on spaces as a collective entity, notions of spatial truth, the multiplicity of experience, and Wahrnehmungsapparate, as well as physical, visual, acoustic and virtual manifestations of space in relation to social, cultural, historical and political forces.

Blue Dreams Sep 17 2021 "Capacious and rigorous . . . Blue Dreams, like all good histories of medicine, reveals healing to be art as much as science." --Parul Sehgal, New York Times "Terrific." --@MichaelPollan "Ambitious...Slater's depictions of madness are terrifying and fascinating." --USA Today "A vivid and thought-provoking synthesis." --Harper's A groundbreaking and revelatory history of psychotropic drugs, from "a thoroughly exhilarating and entertaining writer" (Washington Post). Although one in five Americans now takes at least one psychotropic drug, the fact remains that nearly seventy years after doctors first began prescribing them, not even their creators understand exactly how or why these drugs work--or don't work--on what ails our brains. Blue Dreams offers the explosive story of the discovery and development of psychiatric medications, as well as the science and the people behind their invention, told by a riveting writer and psychologist who shares her own experience with the highs and lows of psychiatric drugs. Lauren Slater's revelatory account charts psychiatry's journey from its earliest drugs, Thorazine and lithium, up through Prozac and other major antidepressants of the present. Blue Dreams also chronicles experimental treatments involving Ecstasy, magic mushrooms, the most cutting-edge memory drugs, placebos, and even neural implants. In her thorough analysis of each treatment, Slater asks three fundamental questions: how was the drug born, how does it work (or fail to work), and what does it reveal about the ailments it is meant to treat? Fearlessly weaving her own intimate experiences into comprehensive and wide-ranging research, Slater narrates a personal history of psychiatry itself. In the process, her powerful and groundbreaking exploration casts modern psychiatry's ubiquitous wonder drugs in a new light, revealing their ability to heal us or hurt us, and proving an indispensable resource not only for those with a psychotropic prescription but for anyone who hopes to understand the limits of what we know about the human brain and the possibilities for future treatments.
