The Ethics of Managed Care: Professional Integrity and Patient Rights Mar 13 2021 This collection provides a

philosophical and historical analysis of the development and current situation of managed care. It discusses the relationship between physician professionalism and patient rights to affordable, high quality care. Its special feature is its depth of analysis as the philosophical, social, and economic issues of managed care are developed. It will be of interest to educated readers in their role as patients and to all levels of medical and health care professionals.

Quantifiers: Logics, Models and Computation Oct 20 2021 This volume contains a collection of research papers centered around the concept of quantifier. Recently this concept has become the central point of research in logic. It is one of the important logical concepts whose exact domain and applications have so far been insufficiently explored, especially in the area of inferential and semantic properties of languages. It should thus remain the central point of research in the future. Moreover, during the last twenty years generalized quantifiers and logical technics based on them have proved their utility in various applications. The example of natural language semantics has been particularly striking. For a long time it has been believed that elementary logic also called first-order logic was an adequate theory of logical forms of natural language sentences. Recently it has been accepted that semantics of many natural language constructions can not be properly represented in elementary logic. It has turned out, however, that they can be described by means of generalized quantifiers. As far as computational applications of logic are concerned, particularly interesting are semantics restricted to finite models. Under this restriction elementary logic loses several of its advantages such as axiomatizability and compactness. And for various purposes we can use equally well some semantically richer languages of which generalized quantifiers offer the most universal methods

of describing extensions of elementary logic. Moreover we can look at generalized quantifiers as an explication of some specific mathematical concepts, e. g.

Blameworthy Belief Mar 25 2022 Believing the wrong thing can have drastic consequences. The question of when a person is not only ill-guided, but genuinely at fault for holding a particular belief goes to the root of our understanding of such notions as criminal negligence and moral responsibility. This book explores the conditions under which someone may be deemed blameworthy for holding a particular belief, drawing on contemporary epistemology, ethics and legal scholarship.

Variability of Air Temperature and Atmospheric Precipitation in the Arctic Jun 27 2022

It has been known at least since the end of the century that the polar areas play a very important role in the formation of the Earth's climates. It is also known today that they are the most sensitive regions to climatic change, and are thus perfect case studies for the detection of such changes. The most serious obstacle to the study of climatic and other geographical elements of the polar areas (including the Arctic) has always been the severe climatic conditions which prevail in these regions. Because of these extreme conditions, research into particular elements of the climatic system (including the atmosphere) began here much later than it did in lower latitudes. For instance, the whole area of the Arctic was not sufficiently covered with a network of meteorological stations until the late 1940s (and even then there were large areas of the central Arctic and the Greenland interior for which no data were available). This is probably why it was not until the start of the 1990s that a body of work began to appear which analysed in any depth climatic variability for the Arctic as a whole. While a

considerable number of papers had been published before this period, most of them were local studies presenting highly localised information, providing air temperature measurements but often little else.

Other Minds Sep 18 2021 This book has been a long time in the making. Other issues have taken me away from it from time to extended time. But I kept coming back to the problem of other minds. It has remained a great issue, it is much contested still, and it is, after all, close to us all. I like believing that the time taken has deepened my understanding of the problem and how it is to be handled. Other people, some by disagreeing vehemently, have helped greatly. I mention in particular, Brian Ellis, Robert Fox, Graeme Marshall, Tim Oakley, Ray Pinkerton and Robert Young. Robert Pargetter argued with me, and kept insisting that I write this book. John Bigelow, Michael Bradley, Keith Campbell, Frank Jackson, and William Lycan assisted by reading an earlier version and providing valued comments. Frank Jackson has been specially helpful, not just on this topic. He can be blamed for initially causing me to take the analogical inference seriously. The La Trobe Philosophy Department has been a good place to do philosophy. I am grateful to Suzanne Hayster, Sandra Paul, and Betty Pritchard for struggling at various times with various recalcitrant manuscripts. Most particularly I thank Gai Larkin. She has seen the project through, with considerably more than efficiency.

Thin-Walled Composite Beams Aug 25 2019 This is the first

monograph devoted to the foundation of the theory of composite anisotropic thin-walled beams and to its applications in various problems involving the aeronautical/aerospace, helicopter, naval and mechanical structures. Throughout the theoretical part, an effort was made to provide the treatment of the subject by using the equations of the 3-D elasticity theory. Non-classical effects such as transverse shear, warping constraint, anisotropy of constituent materials yielding the coupling of twist-bending (lateral), bending (transversal)-extension have been included and their implications have been thoroughly analyzed. Thermal effects have been included and in order to be able to circumvent their deleterious effects, functionally graded materials have been considered in their construction. Implications of the application of the tailoring technique and of the active feedback control on free vibration, dynamic response, instability and aeroelasticity of such structures have been amply investigated. Special care was exercised throughout this work to address and validate the adopted solution methodologies and the obtained results against those available in the literature and obtained via numerical or experimental means.

Making Harvard Modern Feb 09 2021 Making Harvard Modern is a candid, richly detailed portrait of America's most prominent university from 1933 to the present: seven decades of dramatic change. Early twentieth century Harvard was the country's oldest and richest university, but not necessarily its outstanding one. By the century's end it was widely regarded as the nation's, and the world's, leading institution of higher education. With verve, humor, and insight, Morton and Phyllis Keller tell the story of that rise: a tale of compelling personalities, notable achievement and no less notable academic pratfalls. Their book is based on rich and revealing archival materials, interviews, and personal experience. Young, humbly

born James Bryant Conant succeeded Boston Brahmin A. Lawrence Lowell as Harvard's president in 1933, and set out to change a Brahmin-dominated university into a meritocratic one. He hoped to recruit the nation's finest scholars and an outstanding national student body. But the lack of new money during the Depression and the distractions of World War Two kept Conant, and Harvard, from achieving this goal. In the 1950s and 1960s, during the presidency of Conant's successor Nathan Marsh Pusey, Harvard raised the money, recruited the faculty, and attracted the students that made it a great meritocratic institution: America's university. The authors provide the fullest account yet of this transformation, and of the wrenching campus crisis of the late 'sixties. During the last thirty years of the twentieth century, a new academic culture arose: meritocratic Harvard morphed into worldly Harvard. During the presidencies of Derek Bok and Neil Rudenstine the university opened its doors to growing numbers of foreign students, women, African- and Asian-Americans, and Hispanics. Its administration, faculty, and students became more deeply engaged in social issues; its scientists and professional schools were more ready to enter into shared commercial ventures. But worldliness brought its own conflicts: over affirmative action and political correctness, over commercialization, over the ever higher costs of higher education. This fascinating account, the first comprehensive history of a modern American university, is essential reading for anyone with an interest in the present state and future course of higher education.

Collected Papers of Stig Kanger with Essays on his Life and

Work Dec 22 2021 Stig Kanger (1924-1988) made important

contributions to logic and formal philosophy. Kanger's dissertation *Provability in Logic*, 1957, contained significant results in proof theory as well as the first fully worked out model-theoretic interpretation of quantified modal logic. It is generally accepted nowadays that Kanger was one of the originators of possible worlds semantics for modal logic. Kanger's most original achievements were in the areas of general proof theory, the semantics of modal and deontic logic, and the logical analysis of the concept of rights. He also contributed to action theory, preference logic, and the theory of measurement. This is the first of two volumes dedicated to the work of Stig Kanger. The present volume is a complete collection of Kanger's philosophical papers. The second volume contains critical essays on Kanger's work, as well as biographical essays on Kanger written by colleagues and friends.

Language, Mind, and Art Aug 18 2021 This book is a collection of essays in honor of Paul Ziff written by his colleagues, students, and friends. Many of the authors address topics that Ziff has discussed in his writings: understanding, rules and regularities, proper names, the feelings of machines, expression, and aesthetic experience. Paul Ziff began his professional career as an artist, went on to study painting with J. M. Hanson at Cornell, and then studied for the Ph. D. in philosophy, also at Cornell, with Max Black. Over the next three decades he produced a series of remarkable papers in philosophy of art, culminating in 1984 with the publication of *Antiaesthetics: An Appreciation of the Cow with the Subtle Nose*. In 1960 he published *Semantic Analysis*, his masterwork in philosophy of language. Throughout his career he made important contributions to philosophy of mind in such papers as "The Simplicity of Other Minds" (1965) and "About Behaviourism" (1958). In addition to his work in these areas, his

lectures at Harvard on philosophy of religion are an underground classic; and throughout his career he has continued to make art and to search for the meaning of life in the properties of prime numbers. Although his interests are wide and deep, questions about language, art, and mind have dominated his philosophical work, and it is problems in these areas that provide the topics of most of the essays in this volume.

The Limits of Logical Empiricism Jan 23 2022 This volume collects some of the most significant papers of Arthur Pap. Pap's work played an important role in the development of the analytic tradition. This goes beyond the merely historical fact of Pap's influential views of dispositional and modal concepts. Pap's writings in philosophy of science, modality, and philosophy of mathematics provide insightful alternative perspectives on philosophical problems of current interest.

Race, Religion, and the Continuing American Dilemma Jul 29

2022 A classic work on religion and the racial problems of modern america -now brought up to date. Since the early days of the Republic, Americans' exuberant, unchastened idealism, their commitment to the notion of a perfect society in the New World, has clashed with the reality of ugly American society, and religious groups have all too often accommodated themselves to these injustices. In *Race, Religion, and the Continuing American Dilemma*, C. Eric Lincoln reevaluates what Gunnar Myrdal called "the American dilemma" and studies particularly the influence of the black church. This revised edition takes into account the weakening of welfare and affirmative action, and argues that the black church must serve today as a vital moral authority to lead us in to the twenty-first century..

The Dynamics of Thought Feb 21 2022 This book is a selection from the articles that I have written over a period of more than twenty years. Since the focus of my research interests has shifted several times during this period, it would be difficult to identify a common theme for all the papers in the volume. Following the Swedish tradition, I therefore present this as a smörgåsbord of philosophical and cognitive issues that I have worked on. To create some order, I have organized the sixteen papers into five general sections: (1) Decision theory; (2) belief revision and nonmonotonic logic; (3) induction; (4) semantics and pragmatics; and (5) cognition and evolution. Having said this, I still think that there is a common theme to my work over the years: The dynamics of thought. My academic interests have all the time dealt with aspects of how different kinds of knowledge should be represented, and, in particular, how changes in

knowledge will affect thinking. Hence the title of the book.

Parallel Robots Jul 25 2019 Parallel robots are closed-loop mechanisms presenting very good performances in terms of accuracy, rigidity and ability to manipulate large loads. Parallel robots have been used in a large number of applications ranging from astronomy to flight simulators and are becoming increasingly popular in the field of machine-tool industry. This book presents a complete synthesis of the latest results on the possible mechanical architectures, analysis and synthesis of this type of mechanism. It is intended to be used by students (with over 100 exercises and numerous Internet addresses), researchers (with over 500 references and anonymous ftp access to the code of some algorithms presented in this book) and engineers (for which practical results and applications are presented).

Abductive Reasoning Nov 20 2021 **Abductive Reasoning: Logical Investigations into Discovery and Explanation** is a much awaited original contribution to the study of abductive reasoning, providing logical foundations and a rich sample of pertinent applications. Divided into three parts on the conceptual framework, the logical foundations, and the applications, this monograph takes the reader for a comprehensive and erudite tour through the taxonomy of abductive reasoning, via the logical workings of abductive inference ending with applications pertinent to scientific explanation, empirical progress, pragmatism and belief revision.

An Introductory Philosophy of Medicine Dec 10 2020 In this

book the author explores the shifting philosophical boundaries of modern medical knowledge and practice occasioned by the crisis of quality-of-care, especially in terms of the various humanistic adjustments to the biomedical model. To that end he examines the metaphysical, epistemological, and ethical boundaries of these medical models. He begins with their metaphysics, analyzing the metaphysical positions and presuppositions and ontological commitments upon which medical knowledge and practice is founded. Next, he considers the epistemological issues that face these medical models, particularly those driven by methodological procedures undertaken by epistemic agents to constitute medical knowledge and practice. Finally, he examines the axiological boundaries and the ethical implications of each model, especially in terms of the physician-patient relationship. In a concluding Epilogue, he discusses how the philosophical analysis of the humanization of modern medicine helps to address the crisis-of-care, as well as the question of “What is medicine?” The book’s unique features include a comprehensive coverage of the various topics in the philosophy of medicine that have emerged over the past several decades and a philosophical context for embedding bioethical discussions. The book’s target audiences include both undergraduate and graduate students, as well as healthcare professionals and professional philosophers. “This book is the 99th issue of the Series Philosophy and Medicine...and it can be considered a crown of thirty years of intensive and dynamic discussion in the field. We are completely convinced that after its publication, it can be finally said that undoubtedly the philosophy of medicine exists as a special field of inquiry.”
