I Have to Live with Myself, and so, Jul 25 2019 This is a telling of my life experiences. Except in essentials, it is not intended to be about parents, siblings, loves, wives, and children. It is a review of my life experiences, which have been much varied but of little interest to anyone but myself. At age seventy-five, my memory is fading in a strangely uneven manner. Writing this narrative has stimulated my recollections, bringing back events and reconnecting dots in places that had become hazy. It's really mostly for myself. The narrative may tend to weary my readers, few as they may be, in places where it becomes extended, recalling to a degree the technology and the problems that I faced in those times. I say it again: it's really mostly for myself. These are the things that I remember.

*Spaceborne Antennas for Planetary Exploration Mar 01 2020 JPL spacecraft antennas-from the first Explorer satellite in 1958 to current R & D Spaceborne Antennas for Planetary Exploration covers the development of Jet Propulsion Laboratory (JPL) spacecraft antennas, beginning with the first Explorer satellite in 1958 through current research and development activities aimed at future missions. Readers follow the evolution of all the new designs and technological innovations that were developed to meet the growing demands of deep space exploration. The book focuses on the radio frequency design and performance of antennas, but covers environmental and mechanical considerations as well. There is additionally a thorough treatment of all the analytical and measurement techniques used in design and performance assessment. Each chapter is written by one or more leading experts in the field of antenna technology. The presentation of the history and technology of spaceborne antennas is aided by several features: * Photographs and drawings of JPL spacecraft * Illustrations to help readers visualize concepts and designs * Tables highlighting and comparing the performance of the antennas * Bibliographies at the end of each chapter leading to a variety of primary and secondary source material This book complements Large Antennas of the Deep Space Network (Wiley 2002), which surveys the ground antennas covered in support of spacecraft. Together, these two books completely cover all JPL antenna technology, in keeping with the JPL Deep Space Communications and Navigation Series mission to capture and present the many innovations in deep space telecommunications over the past decades. This book is a fascinating and informative read for all individuals working in or interested in deep space telecommunications.*
