Earth Observation of Wildland Fires in Mediterranean Ecosystems Dec 26 2021 Wildland fires are becoming one of the most critical environmental factors affecting a wide range of ecosystems worldwide. In Mediterranean ecosystems (including also South-Africa, California, parts of Chile and Australia), wildland fires are recurrent phenomena every summer, following the seasonal drought. As a result of changes in traditional land use practices, and the impact of recent climate warming, fires have more negative impacts in the last years, threatening lives, socio-economic and ecological values. The book describes the ecological context of fires in the Mediterranean ecosystems, and provides methods to observe fire danger conditions and fire impacts using Earth Observation and Geographic Information System technologies.

Reproductively Active Chemicals Feb 25 2022 *Reproductively Active Chemicals A Reference Guide* Richard J. Lewis, Sr. Adverse effects on the human reproductive system due to chemical exposure are a growing concern of occupational safety and health professionals. While the effects of certain chemicals can be difficult to detect, and often go unnoticed or are mistakenly attributed to other causes, they can drastically increase risks of infertility, sterility, birth defects, and post-birth complications. Written by one of the foremost authorities in the field today, *Reproductively Active Chemicals* is the first book to identify, compile, and fully document the effects of more than 3,300 chemical substances known or suspected to cause adverse effects on human reproductive health. This major reference work features: Cross-indexes by synonym and identification number Vital information drawn from authoritative sources on hazardous chemicals, including chemical properties, toxicity, and synonyms Toxic effects indicating reported dominant reproductive effects The list of reproductively active materials covered here includes drugs, food additives, preservatives, ores, pesticides, dyes, and many other classes of materials. Some of the information also refers to materials of undefined composition. For each entry, the author provides the "DPIM" number, entry name, CAS number, molecular formula, molecular weight, a description of the material, and physical properties. He specifies effects on the male and female reproductive systems, mating success, fetal effects including abortion and transplacental carcinogenesis, and post-birth effects. Each reproductive or teratogenic effect reported includes the dose and species exposed, a brief characterization of the exposure conditions, and a reference to the source of the data. Human effects are presented separately from animal data to highlight the data's importance. With its broad range of crucial, up-to-date information, *Reproductively Active Chemicals* is an essential sourcebook for professionals in industrial health and safety and related areas. It offers vital information for protecting current and future generations from the dangers of chemical exposure, and will be especially helpful to industrial hygienists and toxicologists, safety and risk managers, loss prevention personnel, and industrial insurers.

Dictionary of Food Compounds with CD-ROM, Second Edition Sep 22 2021 The increasing world population, competition for arable land and rich fishing grounds, and environmental concerns mandate that we exploit in a sustainable way the earth's available plant and animal resources for human consumption. To that end, food chemists, technologists, and nutritionists engage in a vast number of tasks related to food availability, quality, safety, nutritional value, and sensory properties—as well as those involved in processing, storage, and distribution. To assist in these functions, it is essential they have easy access to a collection of information on the myriad compounds found in foods. This is particularly true because even compounds present in minute concentrations may exert significant desirable or negative effects on foods. Includes a foreword by Zdzislaw E. Sikorski, Gdańsk University of Technology, Poland; Editor of the CRC Press Chemical & Functional Properties of Food Components Series. *Dictionary of Food Compounds, Second Edition* is presented in a user-friendly format in both hard copy and fully searchable CD-ROM. It contains entries describing natural components of food raw materials and products as well as compounds added to foods or formed in the course of storage or processing. Each entry contains the name of the component, the chemical and physical characteristics, a description of functional properties related to food use, and nutritional and toxicological data. Ample references facilitate inquiry into more

detailed information about any particular compound. Food Compounds Covered: Natural Food Constituents Lipids Proteins Carbohydrates Fatty acids Flavonoids Alkaloids Food Contaminants Mycotoxins Food Additives Colorants Preservatives Antioxidants Flavors Nutraceuticals Probiotics Dietary Supplements Vitamins This new edition boasts an additional 12,000 entries for a total of 41,000 compounds, including 900 enzymes found in food. No other reference work on food compounds is as complete or as comprehensive.

Millimeter-Wave (mmWave) Communications May 07 2020 The millimeter-wave frequency band (30–300 GHz) is considered a potential candidate to host very high data rate communications. First used for high capacity radio links and then for broadband indoor wireless networks, the interest in this frequency band has increased as it is proposed to accommodate future 5G mobile communication systems. The large bandwidth available will enable a number of new uses for 5G. In addition, due to the large propagation attenuation, this frequency band may provide some additional advantages regarding frequency reuse and communication security. However, a number of issues have to be addressed to make mm-wave communications viable. This book collects a number of contributions that present solutions to these challenges.

Micronutrient Fertilizer Use in Pakistan Jun 19 2021 Micronutrient research has been an important component of the soil fertility and plant nutrition program in Pakistan since the identification of zinc deficiency in rice in 1969. Since then, considerable progress has been made on diagnosis and management of micronutrient nutrition problems in crops. However, now there is growing R&D evidence that micronutrient malnutrition in humans could be addressed through enriching staple food grains with micronutrients. This book presents the latest R&D information on micronutrient problems in crop plants/cropping systems and their corrective measures. The current status, the constraints, and economic benefits of using micronutrient fertilizers for optimizing crop productivity and soil resource sustainability are discussed along with estimating future potential requirement of micronutrient fertilizers to optimize crop productivity, produce quality, and soil resource sustainability. Wide-scale preventable micronutrient deficiencies in human populations originate from micronutrient-deficient soils over which staple cereals and other food crops are grown. This book summarizes R&D information on fertilizer use-based micronutrient biofortification in staple food grains to address "hidden hunger" in human populations. The book also presents the best management practices by which micronutrient deficiencies could be corrected in crop plants in a farmer-friendly manner. Features Reviews the micronutrients R&D carried out in Pakistan over the past five decades Focuses on soil–plant analysis techniques for effective prognosis and diagnosis of micronutrient disorders Presents spatial variability maps of micronutrient deficiencies in agricultural soils and crops Provides value–cost ratios of using micronutrient fertilizers for major crops Works out current use level of micronutrient fertilizers and their potential future requirements in the country Discusses agronomic biofortification approach for enriching crop-based food with micronutrients to address "hidden hunger" Presents a compelling case for enhanced use of the deficient micronutrient fertilizers to optimize crop productivity, farmer income, and national economy Presents micronutrient fertilizer use recommendations for salient crops and discusses fertilizer use for micronutrients in the context of 4R nutrient stewardship Recommends future R&D needed for optimizing micronutrient nutrition of crops
