Food Security in Asia Dec 23 2019 Papers from an April 1998 conference held in Taipei, Taiwan, analyze the forces affecting the demand for, and supply of, staple foods in both developed and developing Asian countries. Particular attention is paid to the effects of rice production strategies and trade policies on food security. Papers discuss the implications of trade

liberalization in the ASEAN free trade area and in East Asia on agricultural trade and food security, and examine the implications of China's ongoing economic transition on its agricultural trade and its policy on self-sufficiency. Of interest to scholars of Asian studies, agricultural economics, and international economics. Chern is affiliated with the Department of Agricultural, Environmental and Development Economics at

the Ohio State University. Annotation copyrighted by Book News Inc., Portland, OR *Economic and Financial Integration in South Asia* Jun 09 2021 This book analyses the current state and potential of economic and financial integration in South Asia, which has emerged as one of the most dynamic regions of the world. It looks at how regional convergences and cooperation would reinforce ties amongst the diverse economies of South Asia in the changing global economic landscape. Drawing on empirical research, the book looks at the degree of economic and financial integration in South Asia, which according to the World Bank includes the least integrated regions in the world, and explores the fundamental factors that drive integration amongst these countries. It offers important insights into the financial landscape of the region, as well as the dynamics of the interlinkages in the banking system, the stock markets, and the debt markets. The book examines the role of bilateral trade in

augmenting regional economic ties, the opportunities for growth these will foster, and the major challenges and roadblocks for the leaders of the region. It also provides an overview of China's role in South Asia's financial integration and the interdependence of these economies for economic opportunities, macroeconomic and financial stability, jobs, sustainable growth, and inclusive development. Detailed and insightful, this book will be of great interest to investors and regional policymakers. It will also be of interest to researchers and students of economics, public and foreign policy, finance, international relations, and South Asia studies.

Sustainable Development in Asia Jul 30 2020 This book examines the current main sustainable development issues in Asia from a socio-economic, macroeconomic, and financial perspective, beyond a plain environmental

context. The book further analyzes both financial or health crises, which jeopardize the economic sustainability of countries, particularly in Asia where a sustained economic growth path is an occurrence of the recent past. By doing so, the volume presents case studies on countries such as China, Japan, South Korea, and ASEAN countries, like Thailand. In some instances, the book provides a comparative analysis of the experience of European Union countries. The book is divided into two parts. The first part presents contributions with socio-economic perspectives under the broad heading of sustainable development. Each contribution examines a specific Asian country. Additionally, it looks into China's rise in adjacent regions like the Middle East, discussing China's positioning in the world in the current post-Covid19 context. The second part presents the experiences of a number of Asian countries in terms of financial and economic perspectives, including an analysis of the issue of sovereign debt. The book further

examines broader topics, like the sustainability of the top financial centers, and micro-finance. The volume is a must-read for scholars, students, and practitioners, interested in a better understanding of sustainable development issues in Asia in particular, and economics in general.

Diverse Development Paths and Structural Transformation in the Escape from Poverty

Aug 19 2019 This volume analyzes the experiences of developing countries in Asia, Latin America, and Sub-Saharan Africa, and examines how they might catch up. Based on growth performance across the developing world over the last five decades, it offers a thorough account of the possibilities to engage in such processes in an increasingly globalized world. Together, the chapters highlight the diversity and variation of development pathways and provide valuable lessons and implications for how to approach this difficult question. The book shows the importance of acknowledging that the process of development is dynamic and that the

possibilities for catch up are situation dependent. At the same time it makes clear that without structural change, and in particular agricultural transformation, sustained catch up is unlikely to happen. The volume demonstrates how analysis of current growth processes in developing countries can be enriched by paying closer attention to the multifaceted nature of both economic backwardness and successful pathways to escape it.

A World Trade Organization for the 21st Century Dec 03 2020 'This unique compilation of essays addresses a core political-economy question: how do market forces and trade regulation interact? Its fresh Asian perspective offers a much needed contribution to our understanding of how treaty-based regional and bilateral economic integration is driven by the factory Asia phenomenon. the authors also compellingly show where the World Trade Organization could fit in. An informative read for scholars and experts alike.' - Manfred Elsig,

University of Bern, Switzerland the global financial crisis exposed great shortcomings in the global economic architecture, generating extensive international debate about possible remedies for these deficiencies. Postwar global architecture was guided by major developed economies, centered around the IMF, the GATT and the World Bank. Today, the balance of economic power is shifting toward emerging economies. Global governance and economic policy must reflect this shift.

Learning for Innovation in the Global Knowledge Economy Jan 16 2022 This book is a major step forward in understanding the learning behaviour of clustered technology-intensive small and medium-sized enterprises (SMEs). Drawing upon qualitative and quantitative research methods and sampling techniques, it identifies how learning for innovation is stimulated or inhibited. An informative, challenging and comprehensive empirical study and analysis, this book will be

useful to scholars and students of regional development, European and Asian relations, development economics, and management studies. It will also be a valuable reference to decision-makers, policy analysts and international businessmen seeking to understand how the process of learning and acquisition of knowledge could improve the innovative performance, growth and competitiveness of firms in which they are located.

Maritime Economics and Business Aug 23 2022 Asian shipping entrepreneurship relies on strong ties between private entities and public institutions (i.e. governments). This book examines the growth and sustainability of the Asian maritime world through the lens of the Asian cultural code, its social and institutional economics as well as its unique way of public governance. The book addresses the economics of maritime industry in a broader stroke to include ship owning, shipbuilding, port operation

and its links and collaborations to other industries from a refreshing perspective. The book also examines major maritime nations of Asia in three dimensions: history, strategy (also policy) and the current state of the maritime industry. The relationship between Asian shipping giants and public institutions is also explored, along with the recent developments and challenges of the regional maritime industry in the era of a marine tech boom, upsizing tonnage and environmental debates. Its comprehensive overview of and unique approach to the subject makes the book a valuable reference to anyone interested in the topic.

The Role of Government in East Asian Economic Development Mar 06 2021 The role of government in East Asian economic development has been a continuous issue. Two competing views have shaped enquiries into the source of the rapid growth high-performing Asian economies and attempts to derive a general lesson for other developing economies:

the market-friendly view, according to which government intervenes little in the market, and the developmental state view, in which it governs the market. What these views share in common is a conception of market and government as alternative mechanisms for resource allocation. They are distinct only in their judgement of the extent to which market failures have been, and ought to be, remedied by direct government intervention. This collection of essays suggests a breakthrough, third view: the market-enhancing view. Instead of viewing government and the market as mutually exclusive substitutes, it examines the capacity of government policy to facilitate or complement private sector co-ordination. The book starts from the premise that private sector institutions have important comparative advantages over government, in particular in their ability to process information available on site. At the same time, it recognizes that the capabilities of the private sector are more limited in developing

economies. The market-enhancing view thus stresses the mechanisms whereby government policy is directed at improving the ability of the private sector to solve co-ordination problems and overcome other market imperfections. In presenting the market-enhancing view, the book recognizes the wide diversity of the roles of government across various East Asian economies-including Japan, Korea, Hong Kong, Malaysia, and China-and its path-dependant and developmental stage nature.

Rethinking the East Asian Miracle Nov 21 2019 This volume provides highly illuminating, analytic perspectives on key facets of the East Asian economies. It discusses weaknesses in the financial sector, corporate governance, exchange rate and trade policies, regulatory capability, and proposes remedies. Rethinking the East Asian Miracle is an indispensable book for all those with an interest in East Asia's prospects in the early decades of the new century.

Macroeconomics for Business and Society

Feb 17 2022 In recent years the world economy has been undergoing drastic changes, the East Asian miracle, the financial crisis, and today, globalization and the fundamental changes associated with the 'new economy'. This book integrates these developments with macroeconomics for business managers and policymakers. Macroeconomics is essential background for the business manager and policymaker. Consequently macroeconomics is an integral part of the business curriculum in mature and developing countries alike. And well it should be. The economy affects decisions by investors, manufacturers, distributors, importers and exporters, etc. in all parts of the world. Often, it is the difference between growth and profitability on one hand, and stagnation or failure on the other. In recent years as the world economy has undergone overwhelming changes, especially in East Asia and now in the advanced countries, understanding what is going on in the

local economy and 'out there in the world' has become a particular challenge to managers. The new developments, of which the 'new economy' is the most recent one, do not supercede the basic theoretical framework of macroeconomics. But they add greatly to the challenge of understanding the economic situation and to its uncertainty. This book was originally written to meet the needs of a business curriculum based on the program at the Sasin Graduate Institute of Business Administration of Chulalongkorn University in Bangkok in collaboration with the Wharton and Kellogg Business Schools in the United States. The book is intended for a broad audience - both domestic and international - that includes mature MBA business students, intermediate level undergraduates, and informed laypersons.

Reform of the International Monetary

System Nov 02 2020 By providing a comprehensive overview of policy proposals for the international monetary system from an Asian

perspective, this book aims to identify what innovations are needed to reform the international monetary and financial system to promote financial stability and sustainable economic growth for emerging economies. The book is organized into four parts. Part 1 discusses major theoretical and empirical issues related to reform of the international monetary system. Part 2 includes two chapters that present the recent developments and challenges for managing capital flows. Part 3 presents different perspectives on regional currency cooperation in Asia and Europe by assessing the evidence supporting increased currency coordination in Asia and by review issues of policy cooperation in the Euro area after the global financial crisis and their implications for Asia. Part 4 discusses emerging issues for regional/global cooperation and financial safety nets. The main inference of the book is that, in light of the drawbacks of the existing international monetary system exposed in the

global financial crisis, along with other countries, Asian emerging economies should work cooperatively to reform and strengthen international monetary and financial policy. To do so, regional and global monetary cooperation is needed and financial safety nets should be strengthened to alleviate the impact of possible global financial crises. This will be one of the first books written about the global financial crisis and the on going the European sovereign debt crisis to comprehensively address the issues related to currency cooperation, based on the Euro area experience, with the specific implications for Asia.

Management Geography Apr 07 2021

Management geography explores the spatial characteristics of management-related issues, especially of firms. This book discusses management geography in Japan and other Asian countries from Asian perspectives. The field has made significant contributions to the global economy but has not been deeply

investigated in English-language geographical literature to date. The book addresses the following critical questions: What kinds of challenges do multinational corporations in Japan and other Asian countries face? How are managerial actors in multinational enterprises (MNEs) embracing boundary-spanning activities in a global context? How do firms and related entities cultivate business pipelines and 'buzz' within and beyond local regions? How do actors in Japanese MNEs, small- and medium-sized enterprises (SMEs) and related institutions embed various managerial processes at overseas locations? This book consists of two parts: Part I discusses the application and roles of Japanese and international managerial practices in the globalizing world. Part II examines changing business communities in the industrial and rural spaces of East Asia, focusing primarily on Japan and China. This work will interest readers in a wide range of fields, including geography, management studies, economics, urban planning

and sociology. The book is also suitable for upper-level undergraduate students and graduate students in geography, management studies and related fields.

Chinese Entrepreneurship Sep 12 2021 After more than 30 years of reformations in agriculture, manufacturing and trade and industry, China's economy has grown to become the second largest in the world. This book examines the contributions of dynamic entrepreneurs to the economic development of mainland China and Hong Kong - an analysis that is largely lacking in existing studies China's economic stronghold. This book adopts theories of entrepreneurship and market processes as major analytical frameworks to conclude that entrepreneurship is the true engine of growth in mainland China and Hong Kong. Chinese Entrepreneurship focuses on the knowledge drivers and systemic challenges of these businesses to examine how entrepreneurs under uncertainty identify and pursue profit

opportunities, and how their efforts have enhanced China's economic dynamics. This book offers vital insight to students, teachers and researchers of Chinese business and economics, along with Chinese culture and expanding economies.

Japan, China, and the Growth of the Asian International Economy, 1850-1949 Sep 19

2019 Modern Asian economic history has often been written in terms of Western impact and Asia's response to it. This volume argues that the growth of intra-regional trade, migration, and capital and money flows was a crucial factor that determined the course of East Asian economic development. Twelve chapters are organized around three main themes. First, economic interactions between Japan and China were important in shaping the pattern of regional industrialization. Neither Japan nor China imported technology and organizations, and attempted to "catch up" with the West alone. Japan's industrialization took place, taking

advantage of the Chinese merchant networks in Asia, while the Chinese competition was a critical factor in the Japanese technological and organizational "upgrading" in the interwar period. Second, the pattern of China's integration into the international economy was shaped by the growth of intra-Asian trade, migration, and capital flows and remittances. While the Western impact was largely confined to the littoral region of China, intra-Asian trade was more directly connected with China's internal market. Both the fall of the imperial monetary system and the rise of economic nationalism in the early twentieth century reflected increasing contacts with the Asian international economy. Third, a study of intra-Asian trade and migration helps us understand the nature of colonialism and the international climate of imperialism. In spite of the adverse political environment, East Asian merchant and migration networks exploited economic opportunities, taking advantage of colonial

institutional arrangements and even political conflicts. They made a contribution to national and regional economic development in the politically more favourable environment after the Second World War, by providing the valuable expertise and entrepreneurship they had accumulated prewar. The character of the international order of Asia, governed by Western powers, especially Britain, but shared also by Japan for most of the period, was "imperialism of free trade", although it eventually collapsed by the late 1930s.

As economic development in China for the last 30 years has been mostly "top down," this text focuses on the macroeconomic and monetary sides of the economy. Utilising case studies throughout, the book uses not only the traditional macroeconomics tools in explaining the Chinese economy, but also takes a novel approach by assessing China as a company. Through employment of models from finance, such as cash flows and valuations, the text is able to dig deeper into understanding the fundamental characteristics of the Chinese economy. The book also presents extremely useful analysis of the comparisons and contrasts between Chinese economic activity and that of

the U.S. economy. eResources including chapter questions with solutions and lecture slides will be available on this webpage.

Macroeconomics Oct 25 2022 Unique in its unbiased perspective, *Macroeconomics: An Asian Perspective* traces the history of macroeconomics, the evolution of macroeconomic thought and the resulting theories and policies. All points of view are covered and the result is a comprehensive and detailed view of modern macroeconomic theory. This revised edition is 'Asianized' to incorporate empirical evidence and illustrations from the major East Asian economies including Japan, the newly-industrializing economies and the Association of Southeast Asian Nations.

Democracy, Market Economics, and Development Sep 24 2022 'Democracy, Market Economics, and Development' evaluates the extent to which democracy is necessary to the achievement of sustainable development in Asia. A selection of papers by distinguished

contributors including Amartya Sen, Joseph Stiglitz, and Francis Fukuyama are included in this volume. This book argues that democracy and markets are complementary and that democracy is intrinsic to development. It contends that liberal and participatory democracy encourages development by providing legitimacy to reform efforts. Movement toward liberal and participatory democracy allows for the convergence of the political and economic institutions of Asia and the West. There is broad agreement that effective and sustainable development is multi-faceted and is not only based on changes in per capita income.

The Economics of Pollution Control in the Asia Pacific Jun 16 2019 This work reveals that the make-up of Asian politico-economic systems has a direct impact on environmental policies, from benefit estimation to instrument choice. The authors argue that policy makers in Asia cannot draw upon European and American methods

without considerable modification.

East Asian Business Systems in Evolutionary Perspective Jan 24 2020

Economic studies on East Asia economies in general and Chinese economies are not lacking. However, most studies hitherto adopt the conventional neo-classical economic approach. In particular, the Cobb-Douglas production function and/or theory of comparative advantage are often applied to explain economic growth of an Asian economy. In international business, Dunning's eclectic theory is also widely adopted to understand the pattern of foreign direct investments in East Asian economies. Yet it is generally agreed that the mainstream neo-classical approach has severe drawbacks and limitations. In particular, it does not consider the role of knowledge and uncertainty. Entrepreneurship, which is the true engine of growth, is largely missing in neo-classical economics. This book uses the evolutionary approach to analyse economic and business

activities in East Asian economies. Specifically, the book focuses on knowledge and coordination problems and examines the role of entrepreneurship in economic affairs.

Stephen Roach on the Next Asia Feb 23 2020 As Morgan Stanley's chief Asia specialist, getting Asia right is Stephen Roach's personal obsession, and this in-depth compilation represents more than 70 of Roach's key research efforts not just on Asia, but also on how the region fits into the broad context of increasingly globalized financial markets. The book argues that the "Asia factor" is not a static concept, but rather one that is constantly changing and evolving. Broken down into five parts—Asia's critical role in globalization; the coming rebalancing of the Chinese economy; a new pan-regional framework for integration and competition; and a frank discussion of the biggest risk to this remarkable transformation—this book will help readers understand and profit from the world's most

dynamic region.

International Economic Integration and Asia Nov 14 2021 Regional economic integration has become a key force in international commercial policy in the 2000s. Europe has traditionally embraced regionalism; the United States became actively involved in preferential trading arrangements only in the 1980s. While Asia has been late in accepting formal regional economic integration accords, all Asian countries are now in the process of creating various free-trade areas and other forms of economic integration programs, and some are already in place. This volume analyzes the regionalism trend from an Asian perspective. It considers the lessons from, and the economic implications of, various economic integration programs in the OECD (mostly the EU but also NAFTA), as well as the proposals for closer economic integration in the region itself. Chapters deal with both real and financial integration issues. Sample Chapter(s). Chapter 1: East Asian Economic Regionalism:

Readership: Academics, policymakers, professionals and students interested in applied international economics and Asian economic integration. *The Dynamics of Asian Manufacturing* Mar 26 2020 Manufacturing has played a key role in the economic fortunes of the East and South Asian regions. This timely book analyses patterns of rapid catch-up and relative stagnation in the manufacturing sector and links these to economic growth in the region. Dr Timmer describes the manufacturing performance of five Asian countries since the 1960s: China, India, Indonesia, South Korea and Taiwan. Over this period Asian industrial development is placed in an international perspective by comparison with the world productivity leader, the USA. The author uses new empirical data to assess the degree of structural change in the manufacturing sector and its importance for

productivity growth. He then discusses conditions for economic growth and catch up, and reviews the role of industrial and technology policies in the promotion of industrial development in Asia.

Macroeconomic Shocks and Unconventional Monetary Policy Apr 26 2020 Barely two decades after the Asian financial crisis Asia was suddenly confronted with multiple challenges originating outside the region: the 2008 global financial crisis, the European debt crisis, and finally developed economies' implementation of unconventional monetary policies. The implementation of quantitative easing, ultra-low interest rate policies, and negative interest rate policies by a number of large central banks has given rise to concerns over financial stability and international capital flows. **Macroeconomic Shocks and Unconventional Monetary Policy: Impacts on Emerging Markets** explains how shocks stemming from the global financial crisis have affected macroeconomic and financial

stability in emerging Asia. **Macroeconomic Shocks and Unconventional Monetary Policy: Impacts on Emerging Markets** brings together the most up-to-date knowledge impacts of recent macroeconomic shocks on Asia's real economy; the spillover effects of macroeconomic shocks on financial markets and flows in Asia; and key challenges for monetary, exchange rate, trade and macro prudential policies of developing Asian economies. It is authored by experts in the field of international macroeconomics from leading academic institutions, central banks, and international organizations including the International Monetary Fund, the Bank for International Settlement, and the Asian Development Bank Institute.

Indonesia's Textile and Garment Industries Oct 13 2021 The purpose of this paper is to examine the evolution of the Indonesian textile industry, including its abrupt transformation since 1967 (Chapter 2), the rapid growth of exports beginning in the early 1980s (Chapter

3), some international comparisons (Chapter 4) and explanation of the export success (Chapter 5), and an identification of key policy and strategy issues for the industry in the 1990s (Chapter 6).

Resurgent Asia Aug 31 2020 Resurgent Asia analyses the phenomenal transformation of Asia, which would have been difficult to imagine, let alone predict, fifty years ago, when Gunnar Myrdal published Asian Drama. In doing so, it provides an analytical narrative of this remarkable story of economic development, situated in its wider context of historical, political, and social factors, and an economic analysis of the underlying factors, with a focus on critical issues in the process of, and outcomes in, development. In 1970, Asia was the poorest continent in the world, marginal except for its large population. By 2016, it accounted for three-tenths of world income, two-fifths of world manufacturing, and one-third of world trade, while its income per capita converged towards

the world average. However, this transformation was associated with unequal outcomes across countries and between people. The analysis disaggregates Asia into its four constituent sub-regions--East, Southeast, South, and West--and further into fourteen economies--China, India, South Korea, Indonesia, Turkey, Taiwan, Thailand, Philippines, Malaysia, Singapore, Pakistan, Bangladesh, Vietnam, and Sri Lanka--which account for more than four-fifths of its population and income. This book enhances our understanding of development processes and outcomes in Asia over the past fifty years, draws out the analytical conclusions that contribute to contemporary debates on development, and highlights some lessons from the Asian experience for countries elsewhere. It is the first to examine the phenomenal changes that are transforming economies in Asia and shifting the balance of economic power in the world, while reflecting on the future prospects in Asia over the next twenty-five years. A rich, engaging, and

fascinating read.

Routledge Handbook of South Asian Economics Apr 19 2022 The Routledge Handbook of South Asian Economics addresses the recent economic transformation in South Asia. Leading experts in the field look at the major economic achievements and challenges for the region and examine why economic development across the South Asia region has diverged so significantly since the early 1990s. Providing a cutting-edge review of the economies of South Asia, the Handbook analyzes key growth areas as well as key structural weaknesses and policy challenges facing these economies. Furthermore, it anticipates trends and suggests corrective measures for the South Asian economic region. Sections focus on issues of human development, such as inequality, poverty and quality of schooling, and monetary and fiscal issues, particularly in light of the ongoing global financial crisis. Further sections discuss issues relating to employment and infrastructure, and

on the experience of the region with international trade and financial flows, and environmental challenges. Written by renowned and respected experts on South Asian economics, this Handbook will be an invaluable reference work for students and academics as well as policy makers interested in South Asian Studies, Economics and Development Studies. *International Development* May 28 2020 A central premise is that an objective and universally-accepted measure of “success” in development and paths to it does not exist. *Globalization* Jul 10 2021 The central metaphor is partly constructed out of Michel Foucault's metaphor of the Ship of Fools in *Madness and Civilization*. Building on Foucault's brilliant argument, the three themes of hope, progress, and optimism as used in this book represent idiomatic expressions of the business of modernity that have developed since the time of the Industrial Revolution in the West. With this in mind, this book has been designed for upper

level undergraduates, graduate students, and readers who are interested in contemporary political theory. Those with a background in business, philosophy, political theory, popular culture, economics, international relations, cultural studies, literary studies, and American government will discover themselves at an advantage in understanding the issues explored in the book. It avoids overtly dense theories that often cloud the issue of globalisation and uses plain English to make sense of the most important political phenomenon in the world today. This book uses the American case as a way to understand the complex phenomena of globalization. READERSHIP: Policy makers, researchers, tertiary students and all those interested in the effects of globalisation on modern America & the consequence impact on Asia and rest of the world.

Asian Transformations May 20 2022 Gunnar Myrdal published his magnum opus, Asian Drama: An Inquiry into the Poverty of Nations, in

1968. He was deeply pessimistic about development prospects in Asia. The fifty years since then have witnessed a remarkable social and economic transformation in Asia - even if it has been uneven across countries and unequal between people - that would have been difficult to imagine, let alone predict at the time. Asian Transformations: An Inquiry into the Development of Nations analyses the fascinating story of economic development in Asia spanning half a century. Asian Transformations sets the stage by discussing the contribution of Gunnar Myrdal to the debate on development then and now and providing a long-term historical perspective on Asia in the world. It then uses cross-country thematic studies on governments, economic openness, agricultural transformation, industrialization, macroeconomics, poverty and inequality, education and health, employment and unemployment, institutions, and nationalisms to analyse processes of change while recognizing the diversity in paths and

outcomes. Specific country studies on China, India, Indonesia and Vietnam, and sub-region studies on East Asia, Southeast Asia, and South Asia, further highlight turning points in economic performance and demonstrate factors underlying success or failure. Including in-depth studies by eminent economists and social scientists, *Asian Transformations* comprehensively examines the phenomenal changes that are transforming economies in Asia and shifting the balance of economic power in the world and reflects on the future prospects for this continent over the next twenty-five years. It is a cohesive and multi-disciplinary study of a rapidly changing economic landscape, and makes an important contribution to understanding the complexities and processes of development from different perspectives.

Vision and Calculation Oct 21 2019 This book is a collection of articles on the author's thinking and analysis of China's problems by using the mainstream economic methods. Topics covered

include families in traditional China, land permanent tenancy system, changes of land institutions since modern times, rationality of specialized market, similarities and differences between rent and tax, the role of contracts change in the China's reform, analysis of Asian financial crisis and American financial crisis, the paradox of medical insurance, the business model of e-retail platform with zero price, the relationship between transactions and cities, the religious man who is different from the economic man, and theological coordinates of economics. This book provides a nuanced analysis using a China-styled economic approach for scholars while also allowing lay people to enhance their knowledge of China through the stories and cases presented.

Maritime Economics May 08 2021 Now in its second edition *Maritime Economics* provides a valuable introduction to the organisation and workings of the global shipping industry. The author outlines the economic theory as well as

many of the operational practicalities involved. Extensively revised for the new edition, the book has many clear illustrations and tables. Topics covered include: * an overview of international trade * Maritime Law * economic organisation and principles * financing ships and shipping companies * market research and forecasting.

Household Economics and the Asian Family

Oct 01 2020 In the context of Asia, household economics are particularly significant due to the belief that Asian culture, with its emphasis on family values, plays a central role in economic development. This book examines the relationship between household economics, the family and the emergence of strong Asian economies from a socioeconomic perspective. Characteristics of Asian economies excluded from traditional models are analysed, thereby constructing new models which incorporate modified assumptions consistent with Asian families and economies. This reissue features a new introduction by the editors.

China, the United States, and South-East Asia Feb 05 2021 China's emergence as a great power is a global concern that can potentially alter the structure of world politics. Its rise is multidimensional, affecting the political, security, and economic affairs of all states that comprise the world's fastest developing region of the Asia-Pacific. Most of the recently published studies on China's rise have fo

China's International Projection in the Xi Jinping Era Jun 28 2020 This book illustrates the current state of China's economic and trade relations from the perspective from different countries in the Xi Jinping era. The content is divided into five parts, the first of which traces the development of the Chinese economy starting with the reforms of the 1980s. The second part notes some distinctive elements of China's positioning in the global economy, while the third describes the state of relations between the United States and China under the Trump presidency. The fourth part focuses on

diplomatic and economic equilibria in East Asia, Central and Southern Asia, the Middle East, Africa and Latin America. In turn, the last part addresses relations between China and various European countries. Given its scope, the book is a must-read for economists, policymakers and professionals from around the globe, interested in a better understanding of China's economic prospects in the Xi Jinping era.

Trade, Environment and Sustainable

Development Jul 18 2019 Trade, Environment and Sustainable Development explores the linkages between the objectives of liberalised international trade, protection of the environment and sustainable development. It is an anthology of essays by leading experts, key government officials and political leaders from the South Asian region, supported by officials of the OECD, UNCTAD and non-governmental organisations. Trade, Environment and Sustainable Development outlines the concerns of the developing nations of the South Asian

region about the impacts on their trade and development from the environmental policies of the North. A range of country case and sector studies are presented, along with analysis of key regional issues.

The Blue Economy Dec 15 2021 This volume defines and analyzes the Blue Economy, a system that encompasses all the economic activities which are happening in and around the ocean within a sustainable development framework, with focus on countries in Asia. This work is timely, as Blue Economy activities account for a significant share of GDPs in the island and coastal economies in the Asia region, sustaining the livelihoods of one of the largest sections of the world's population. This book, therefore, assesses how the Blue Economy contributes to these livelihoods from economic and ecological perspectives and analyzes the various types of ecosystem services provided, and how these services are regulated and maintained. While most studies of the Blue

Economy focus only on the economic aspects, this book provides ample statistical data to demonstrate why ecosystem services should additionally be considered for the estimation and valuation of the Blue economy. The book is primarily meant for researchers, students, and

teachers in the fields of environmental and ocean economics, sustainable development, and ecosystem services, and will be of further interest to policymakers and government officials working in matters related to the Blue Economy and sustainability policy.
